

# MANUAL

## RBX (converted RB2 and RBZ) systems

### ON/OFF:

To turn the system "On" or "Off" you simple press the hard-key "MENU" for 3 seconds. The RBX is no longer supplied with the external On/Off key or steering-wheel control.

### NOTES:

- RBX must match the car's CANbus system:  
 Low-speed RBX / Low speed CANbus car = **OK**  
 High-speed RBX / High speed CANbus car = **OK**  
**Other combinations will not work!** Currently more than 90% of all RBXs are made for High-speed CANbus cars.
- PIN is set to: **1 2 3 4**

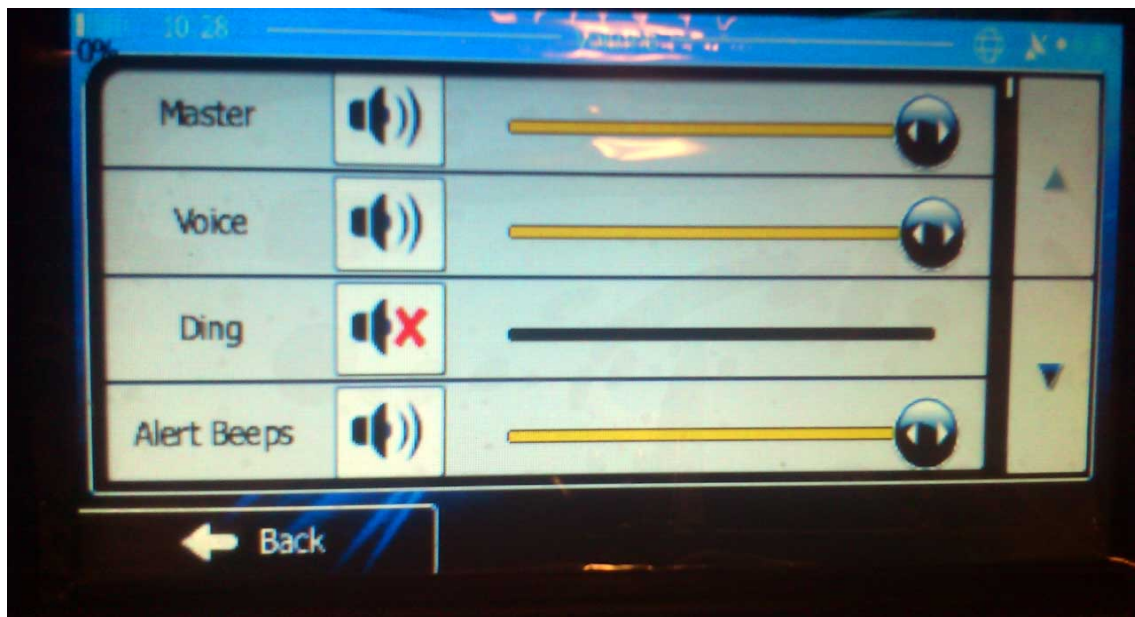

## TROUBLE SHOOTING

### No Sound during GPS navigation.

Is the RBX still installed in the same car as it was when it working?

Please make sure that *the radio mode* on the RBX is fully active, even when you only wish to use the GPS. If the radio mode is in stand-by (=showing the time in white on black background) the GPS will operate normally, but with no sound.

Please check the option menu in GPS mode to ensure *that all desired sounds are active*.

### No GPS navigation soft-key.

The GPS navigation is activated by the “menu “hard key” only. Press for 3 seconds (read more on page 1).
