USA to European radio frequency converter

Every dealer and importer of American cars knows it. USA-FM radios are not synced with the European FM system. This OFF-sync phenomenon makes it impossible to get exact tuning. And owners of American cars require nothing less than perfection.

ICOS Technology now offers every car dealer and importer chance to solve this problem without changing the cars FM radio system. Our radio frequency converters turns costs to incomes.

HOW IT WORKS, The Radio Frequency converter shifts the FM band by - 0.1hz. For example, you want to tune in 103,2 Mhz but the radio will only do 103.1 Mhz and 103.3 Mhz. In this case you will tune in 103.3 Mhz in the radio display and press the button, this will give you 103.2 Mhz.

TECHNICAL SPECIFICATIONS

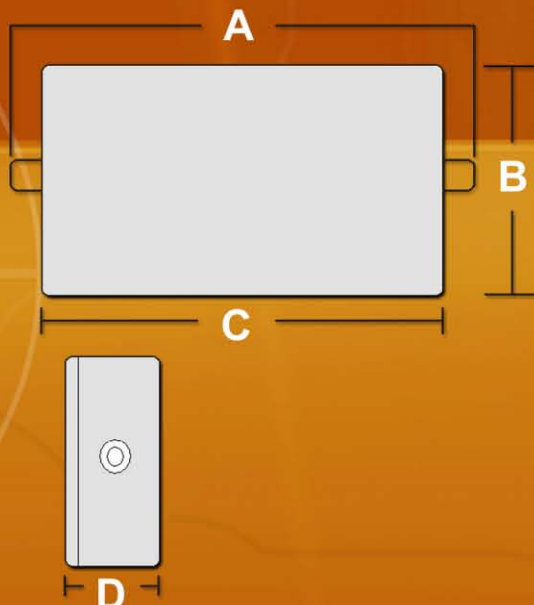

CONTACTS:..... RCA "Female" (Audio-Grade).
CONVERTER TECHNOLOGY:..... ICOS.
OPERATING TEMPERATURE RANGE:.... -40 to + 40 Celsius.
POWER:..... 12 Volt.
WEIGHT:..... 206 gram, approx. incl. Cables.
INSTALLATION:.....

The Radio Frequency converter is connected between the antenna cable and the radio unit, you need to connect 2 cables Ground (gnd), 12 Volt (+12v) and mount the small Button on the dash. 15 minutes of work for a professional.

PLUGS, AERIAL CAR ANTENNA PLUGS:.....

DIMENSIONS:..... A 120 mm, B 50 mm, C 100 mm, D 25 mm
