

SCREW PATTERN MYGIG

Chrysler now have two different screw pattern to consider when you install or order a MYGIG. Up to 2010 cars there was only one (picture 2) screw pattern. But with the 2011 cars a new screw pattern have been introduced (picture 1). MYGIGs coming with the new screw pattern also have a frame around the faceplate (orange 3).

Altogether this may requires some bezel and dashboard work by the garage to get a fit.
